

# GRACEFUL SILKY TOUGH

Feel the beauty of Silcryn.™

You need a tube that feels like a satin ribbon, smooth, low friction and easy on the eyes. You'd also like it to be relatively tear resistant, economical, yet latex and phthalate free for medical applications. You've tried silicone, Tygon and latex but those options all come up short.

We have your solution—Silcryn. Freelin-Wade engineers spent two years working closely with our resin suppliers to develop Silcryn, a specialty thermoplastic. Initially developed as a solution for the dental industry, our customers have discovered its supple, silky smooth finish is also great for medical and industrial applications as well. They not only love how it glides against other tubes and surfaces, but its velvety matte finish looks, frankly, gorgeous.

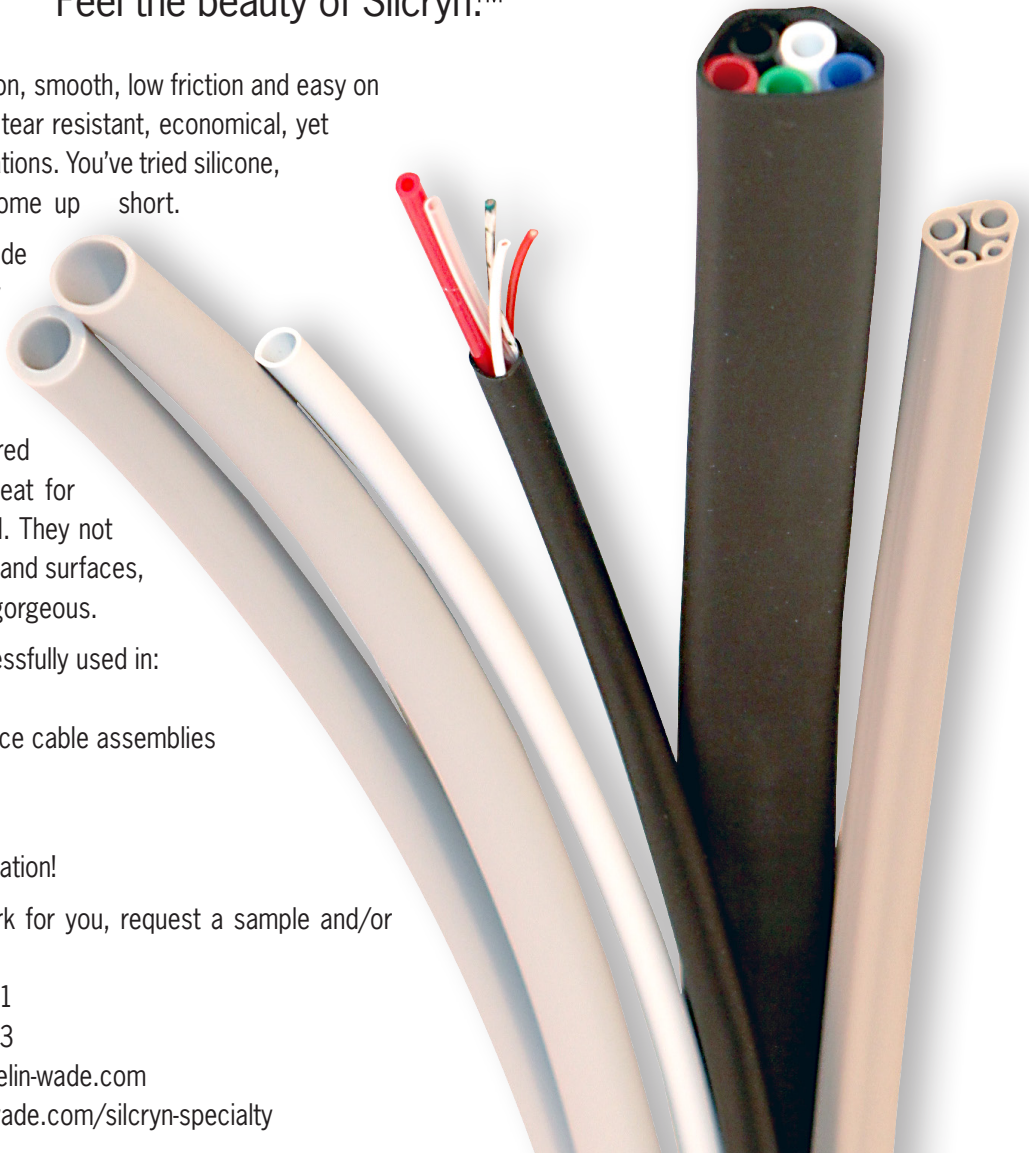

Current applications Silcryn is being successfully used in:

- Dental Handpiece Tubing
- Jacketing for ultrasonic scaler handpiece cable assemblies
- Cable sleeves for medical devices
- Jacketing for industrial applications

But really, it's only limitation is your imagination!

To learn more about how Silcryn can work for you, request a sample and/or request pricing information, contact us:
